

Air-Assisted Airless Module for A7A Spray Gun

Simple, cost-effective conversion to air-assisted airless

High-demand applications such as steel drum finishing may be improved with the addition of air-assisted airless (AAA) spray technologies. A module allows finishers to cost-effectively convert their existing Nordson A7A airless spray guns to air-assisted airless spray.

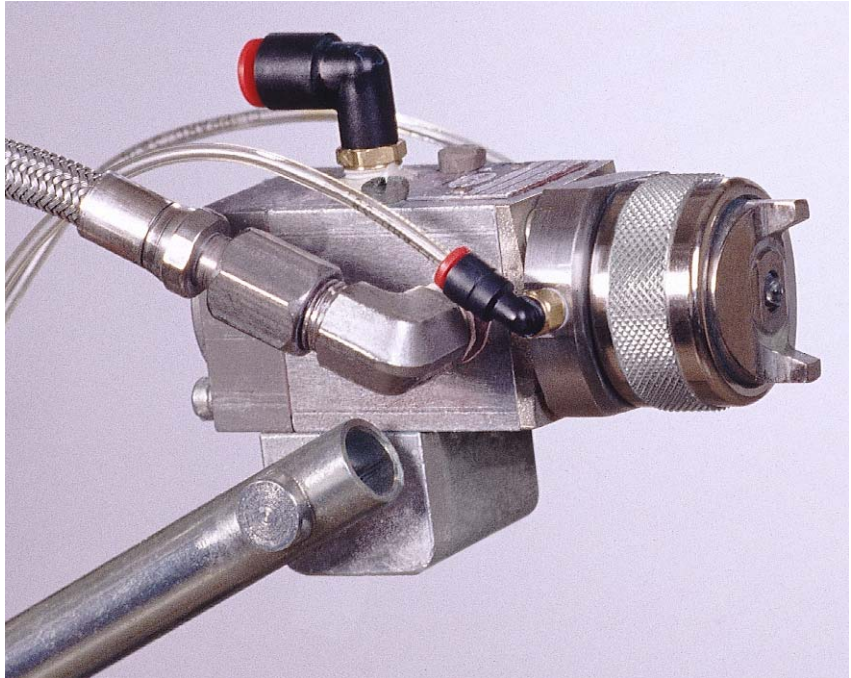

The A7A air-assisted airless module can be installed in seconds. Simply replace the A7A air cap, nozzle and nozzle nut with the AAA module and connect the air supply. The module includes a new air cap which accepts Nordson's Cross-Cut® and dome spray nozzles. To convert the gun back to airless spray, just replace the AAA module with the A7A air cap, nozzle and nozzle nut.

Air-assisted airless technology can atomize higher solids fluids for increased flexibility with both heated and unheated systems. And since the AAA module is designed for ease of installation and removal, you have the added flexibility of two spray technologies with one spray gun.

Cross-Cut® Nozzle Technology

The Nordson A7A air-assisted airless module is designed for use with Nordson's Cross-Cut® and dome nozzles. Cross-Cut nozzles have set the industry standard of excellence for superior atomization and control of higher viscosity coatings. Nordson Cross-Cut and dome spray nozzles are available to provide a wide range of flow rates and pattern widths.

The A7A air-assisted airless module can be installed in seconds.

A7A Spray Gun with AAA Module

Benefits of Air-Assisted Airless Spray

- Operation at lower fluid pressures.
- Pattern control of individual guns on the line.
- Ideal for catalyzed materials where heat cannot be used.
- Less air entrapment with waterborne coatings.

Call Nordson

The A7A air-assisted module is only part of Nordson's complete line of equipment for all your liquid finishing requirements.

For more information and the name of your nearest Nordson distributor, call 800.955.9563. Or visit us on the Internet at www.nordson.com.

Nordson reserves the right to make design changes to products to improve their function.
These changes may occur between printings.
